SUMMARY

Full-Stack Developer with 1 year of experience building web-based systems for the healthcare and enterprise sectors. Experienced in PHP (Laravel, Livewire) and JavaScript/TypeScript (Next.js, React, Vue), with solid experience in MySQL and PostgreSQL. Experienced in end-to-end solution development, including Hospital Management Information Systems (SIMRS), HR systems, and enterprise reporting portals, with a strong focus on system reliability, data integrity, and timely feature delivery

EDUCATION

Politeknik Negeri Padang

Jul 2022 – Aug 2025

Diploma in Informatics Management

GPA: 3.69/4.00

- PKM-PM Vocational 2024 – Funded Project: “Improving Accessibility and Management of M. Ihpan Patient Shelter through a Website-Based Platform”
- TOP 165 Innovillage 5th 2024 – Funded Project: “Exploring the Charm of Rumah Gadang in the Sijunjung Traditional Village through a Virtual Tour”

WORK EXPERIENCE

RS UMMI Bogor | West Java, Indonesia

Oct 2025 – Apr 2026

IT Programmer

- Designed and developed an SSO system for centralized authentication across the hospital’s internal systems, integrating 4 systems in the initial phase and supporting 20 users.
- Developed a WhatsApp patient broadcast system using Wappin for service information, covering 1,000+ patients per month, 20+ manual broadcasts, and 100+ automated broadcasts during the implementation period.
- Developed an External Media Helpdesk System to manage tickets and monitor UMMI Group’s external media services, used by 20 users and generating integrated service reports.
- Developed and enhanced SIMPEG to support HR data management, broadcast notifications, document management, and data synchronization, used by over 300 employees.
- Developed and enhanced the UMMI Performance Appraisal System (SAKU) to support performance evaluations through IKU and IKI assessments and the Employee Idea Cards, used by over 300 employees across 20 units.

PT. Solusi Eksplorasi Rembulan Utama | West Jakarta, Indonesia

Jan 2025 – Jun 2025

Frontend Developer

- Built the Databudi website, one of PT Solusi Eksplorasi Rembulan Utama's (SERU) products, using Next.js to provide product insights and sales performance comparisons.
- Containerized the frontend application using Docker, Dockerfile, and Docker Compose for development purposes.
- Performed data scraping using n8n to collect data as the primary source for product insights and comparisons.

Frontend Developer

- Developed a web-based issuer data portal using Next.js to manage and present issuer data in a single platform.
- Developed filtering and report download features to support daily, monthly, and custom reporting, including the ability to download all data at once.

PROJECTS

Dangau Studio — Platform Bisnis Seni Digital

Jun 2025 – Aug 2025

- Developed a digital art business platform using Laravel to manage artist profiles, galleries, virtual exhibitions, and artwork catalogs in a single platform.
- Integrated Midtrans and RajaOngkir to handle payments and shipping cost calculations, enabling online artwork transactions.

Website Perkampungan Adat Sijunjung

Dec 2024 - Feb 2025

- Developed a tourism and cultural platform using Laravel to provide virtual tours, articles, cultural galleries, local businesses, and tour packages, enabling digital access to tourism information and potential attractions.
- Implemented online transactions for local business products and tour packages to support the digitalization of tourism services and local product sales.

Website Rumah Singgah M. Ihpan

May 2024 - Jul 2024

- Developed a patient shelter platform using Laravel to manage accommodation information and reservations for patients and families from remote areas receiving medical treatment in Padang.
- Integrated Midtrans to provide online donations, enabling digital donation processing through the platform.

Sistem Inventory Jurusan Teknologi Informasi

Sep 2023 - Dec 2023

- Developed an inventory system using PHP and MySQL to centrally manage hardware and software assets.
- Implemented role-based access, asset management, stock monitoring, search, filtering, and transaction logging to improve inventory control and traceability.
